WEBSITE DEVELOPMENT PROPOSAL

Custom Real Estate Marketplace

Prepared for	Dream Properties Limited
Business address	House 07, Road 126, Behind Renaissance Hotel, Gulshan 1, Dhaka, Bangladesh
Prepared by	MD Akhtarujjaman | Web Development & Digital Solutions
Technology	Laravel & MySQL
Project budget	BDT 60,000
Estimated delivery	4–6 weeks

1. Project Overview

Dear Dream Properties Limited Team,

Thank you for sharing the following reference websites:

- https://property.bd/
- https://www.bdhousing.com/
- https://skhpropertiesbd.com/

Based on your references, I propose developing a modern, responsive, and user-friendly real estate marketplace tailored to the business needs of Dream Properties Limited. The platform will allow property owners and users to post properties for sale or rent, enable visitors to search and explore property listings, and provide an administration dashboard for reviewing, approving, rejecting, and managing property submissions.

The website will take inspiration from the provided references while maintaining a distinct visual identity for Dream Properties Limited.

2. Core Features & Functionality

A. Property Listing & Search

- Property listings for apartments, houses, land, plots, and commercial spaces
- Buy and rent categories
- Search and filters by location, property type, price, and size
- Detailed property pages with images, descriptions, facilities, and contact information
- Featured and recently added properties

B. User Registration & Property Posting

- User registration and secure login
- User dashboard
- Property submission with multiple images
- Ability to edit and manage submitted listings
- Listing status tracking: Pending, Approved, Rejected, and Published

C. Admin Dashboard & Approval System

- Review and approve or reject property submissions
- Manage users, property listings, and categories
- Manage homepage content and featured properties
- Review customer inquiries and reported listings
- Control property publication and listing visibility

D. Customer Communication

- Property inquiry forms
- Direct phone contact and WhatsApp links
- Property owner or advertiser contact information
- Site-visit request form

E. Corporate Website

- Professional homepage
- About Us and Contact Us pages
- Company and project highlights
- Responsive design for mobile, tablet, and desktop
- Basic SEO configuration and XML sitemap

3. Technology & Security

The website will be developed using Laravel, MySQL, and a responsive modern frontend. The implementation will include authentication, form validation, secure access controls, and role-based permissions. Basic caching and image optimization will be applied where supported by the hosting environment, alongside search-friendly URLs, metadata, and sitemap configuration. The system will be structured to support future expansion as the business grows.

4. Detailed Project Budget

Total Fixed Project Cost: BDT 60,000

Deliverable	Included Scope
UI/UX and responsive design	Custom layout for mobile, tablet, and desktop
Website pages	Homepage, About Us, Contact Us, and essential corporate pages
Property management	Property listings, details, images, and sale/rent status
User functionality	Registration, login, dashboard, and property submission/editing
Admin approval	Review, approve, reject, and manage listings
Search & filters	Location, property type, price, and agreed filters
Contact features	Inquiry forms and phone/WhatsApp links
Basic SEO	SEO-friendly URLs, metadata, and XML sitemap setup
Testing & deployment	Functional testing, deployment to compatible client-provided hosting
Handover	Agreed source code, database handover, and basic administrator guidance

5. Exclusions & Additional Services

The following are not included in the BDT 60,000 project cost unless explicitly agreed in writing:

- Domain registration and hosting fees
- Paid third-party themes, licences, or services
- Online payment gateway integration

- Paid property listings and subscription billing
- Advanced agent or multi-company dashboards
- SMS gateway and paid API charges
- Native Android or iOS applications
- Large-scale property data entry and professional photography
- Ongoing maintenance and future feature development

Additional features can be scoped and priced separately, subject to client approval.

6. Project Timeline

Estimated delivery: 4–6 weeks. The project will proceed through requirements confirmation, UI/UX approval, development, testing, revisions, deployment, and handover. The timeline begins after project commencement, receipt of the initial payment, and provision of required content. Delays in approvals or changes to the agreed scope may affect delivery.

7. Payment Schedule

Milestone	Percentage	Amount
Advance before development	40%	BDT 24,000
Main development milestone	30%	BDT 18,000
Final delivery and handover	30%	BDT 18,000

Any additional features or changes beyond the agreed scope will require separate cost and timeline approval.

8. Quality Assurance & Handover

Before delivery, the agreed functionality will be tested, including user registration, property submissions, admin approvals, search, and inquiry forms. Upon completion and settlement of the project payment, the agreed source code and database will be handed over to the client. Basic administrator guidance will also be provided.

9. Next Steps

To proceed, we will confirm the final feature list, design preferences, required property categories, and hosting arrangements. Once the scope is approved, development can begin according to the agreed payment schedule and timeline.

Thank you for considering this proposal. I look forward to helping Dream Properties Limited establish a professional real estate marketplace that connects property owners with potential buyers and tenants.

Best regards,

MD Akhtarujjaman
